Sanjay Kumar

I want to work in challenging and growth oriented company where I can enhance my skills and gain knowledge and experience which would give me opportunity for growth both professionally and personally. Being a fresher I am looking forward to making a significant contribution towards organisational goals through my expertise as well as quick learner

Project Work

Fund Transfer Management System

This is a good project . I made this project in my UG . This is application based project. This basically help to people to transfer the money, check balances, add money, create account, and it have on more features that s called ATM. This application also create application pin according to your account .

Disease Pridiction and Medicine Recommendations System

This is one of the my best academic projects. This project to help people to detect disease and recommend medicine according to their disease . This project is build through python and machine learning algorithms model

Hotel Booking Recommendations System

This machine learning based project. This project recommended the hotel for the student and user to use this website. This project simply help to find the hotel whare you want.
